

## *HQ Studio Frame Instructions* **Addendum**

### **Mounting Bracket Holes Change**

*See HQ Studio Frame Instructions Step 7-1, page 16.*

A second set of holes has been added to the mounting bracket for the HQ Studio Frame pole brackets. This allows the pole height to be set in half steps for finer height adjustment.

Normally the best height is found by using the second set of holes from the bottom on the pole bracket and the top set of holes on the frame mount. However, this can be set higher or lower if needed by the end user.

#### **Recommended Settings for Mounting Pole Brackets to the Frame Mount**

##### **Pole Bracket**

Use holes found second from the bottom

##### **Frame Mount**

Use top set of holes
